

Flutter App Development Environment

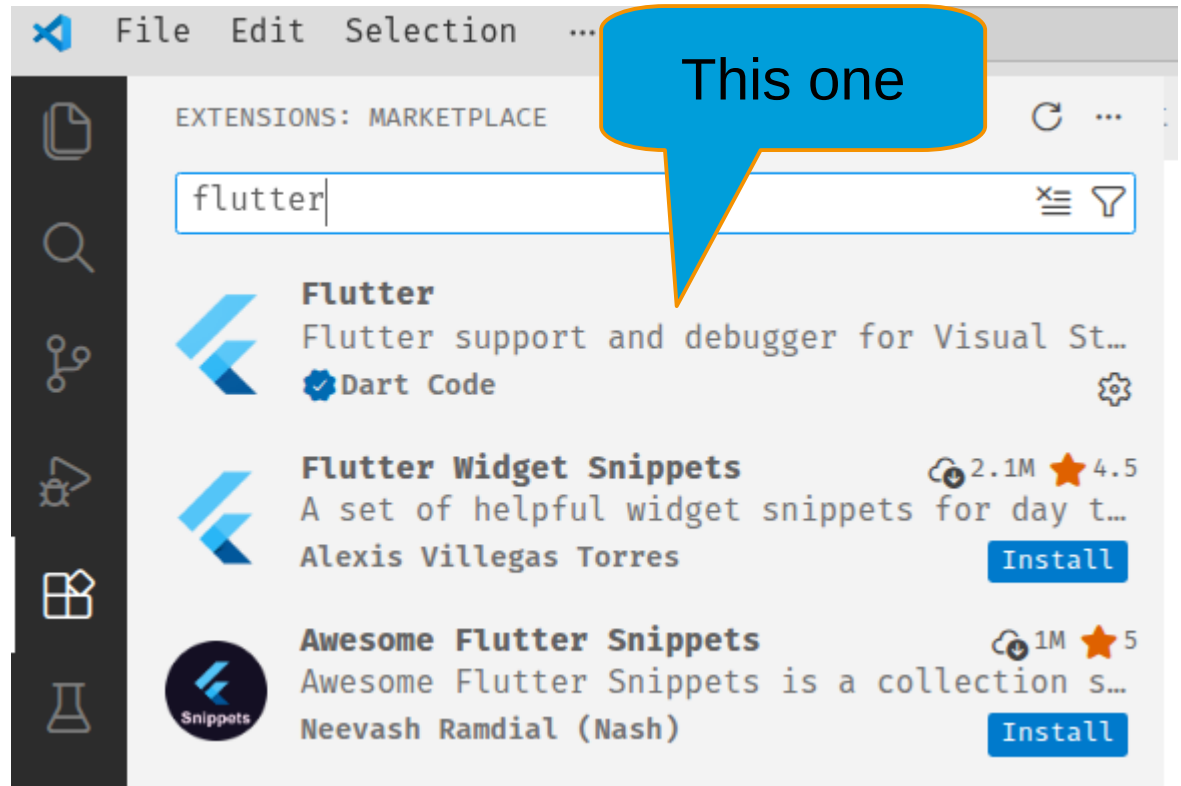

•Installing Flutter SDK & Setup

Install using VS Code→

Click on Extensions

Search for Flutter

- .After the install completion
- .Press ctrl+shift+P and write Flutter:New Project
- .Hit Enter and click on the Download SDK option in the Bottom Right Corner
- .Choose C: drive to install the SDK and wait for download complete(it'll take approx. 5 mins.)
- .After download completion click on the 'Add SDK to Path' option on the bottom right corner.
- .Now open command prompt and check if Flutter is installed successfully write this command: <dart --version> or <flutter --version>
- .If you see versions for both, then dart is installed in your system.

- .The installation Steps are same for Android Studio→**
- .Just open Android Studio and go to plugins tab and search for Flutter Plugin and install it.**
- .After installation follow the on screen instructions to complete the flutter installation.**

- .Running the App on Emulator and Physical Devices**
- .Use Android Studio to Create a Virtual Device Manager.**
- .Now open VS Code and open command palette with `ctrl+shift+P` and type “Flutter:Launch Emulator”**
- .Select the device you created on the Android Studio to run.**

Running the App on Physical Devices:→

- . Connect your Mobile Device and Laptop Either via same WiFi or Physical wired medium.**
- .Turn ON USB Debugging in the phone by tapping several times on the Build No.**
- .Connect both the devices and choose your mobile device from the dropdown menu and run your app.**
