

Passage 5

“Marcus Bartley hails from a family of renowned doctors in Yercaud. It was expected that Bartley too would enter that profession. But even in school, he knew what he wanted to do. His parents left him to make his own choices, and in 1940, Bartley headed to Bombay and got a job as a rookie photographer/reporter with a leading newspaper.

In the small, closely-knit coterie of press photographers, he met Ellis R Dungan, Shantilal Shah (whom I married much later), BK Dilwali of Simla Studios, Carlo Marconi, and Homai Vyarawalla. Bartley did not have any formal training in photography, but he was willing to work hard and do the smallest of jobs. He observed, read, watched and absorbed. My husband would say that as a press photographer, you clicked on the run, and considered yourself lucky if you got four to five clear photographs from a roll of 36. With Bartley, it was almost always 36 out of 36.

In 1945, with the War over, Bartley returned to Madras and cranked his first film. When we caught up with him in 1956, this tall, welcoming man with bright blue eyes was head of the photography department of Vauhini Studios owned by B Nagi Reddy.

Much has been said of Bartley being a difficult person to get along with, because of his bad temper. The truth is that he was a perfectionist, and could not deal with an unprofessional attitude. He didn't believe in hierarchies and treated everyone the same; it is possible he didn't even know the names of the stars in his films. All that mattered to him was that they were punctual.

He did not understand Hindi, spoke fractured Tamil and Telugu, but he made it a point to sit with the script writer and director, understanding the screenplay, so he could work on his lighting style. His specialty was special effects, particularly for mythological films. Bartley had hand-picked a team of light boys and assistants, who carried out his instructions, working in efficient silence. He rarely allowed anyone to handle his lenses. I have seen him holding on to them as though they were the Holy Grail. He was focussed and would work for nights before the actual shooting, lighting the set to make it perfect. He worked with glamorous film stars, but rarely socialised with them. He was teased for being one of the rare Anglo Indians who never danced.

He was excited when Ramu Kariat signed him on for Chemmeen (Malayalam). There were endless problems with this film. After the famed Hrishikesh Mukherjee stepped in to re-edit the confused footage, the film was released in 1965, to unanimous acclaim by critics and audiences. Every aspect of the film was highly praised, in particular the photography by Bartley.

But there were also rumours that Bartley had walked out midway over money matters. No one who knew him would believe he would jeopardise a production over money. Creative differences or unprofessionalism perhaps, but money was the least important aspect of his profession. Sadly, some portions of the film had to be completed by another cameraman and that was enough to cost Bartley the National Award that year. Many years later, senior cameraman U Rajagopal told me that he was only called in to complete patchwork. Bartley finally received the Award in 1969/1970 for Shanti Nilayam.

Bartley was not in good health. He had long suffered with diabetes, refused to go to a doctor, treating himself instead. By 1988, he seemed to lose his driving interest. He was restless and lonely. He decided to give up cinematography, but had more work than he could cope with, repairing lenses.

Arriflex made him their authorised service person and Bartley would sit for hours, doing precision work alone, in silence. He had never had a large circle of friends as his scholarship and iconoclastic brilliance did not allow casual chat. His son Alan admitted him to a hospital but Nagi Reddy shifted Bartley to Vijaya Hospital where he was given personal attention. From the Studios to the Vijaya Hospital, it was as though the wheel had come full circle.

A few days later, as I was about to drive to the hospital, I received his son's call that Bartley had passed away. The roads to his home were jammed for hours. Cars were abandoned and we walked. There were hundreds of weeping people, friends choked with grief, mounds of garlands. His peers, members of every association of the film industry were present. There are not many who remember him today. But his achievements as pioneer, visionary, genius, and guru live on. Rajiv Menon and Madhu Ambat call me on occasion and we speak of Marcus Bartley. He will never be forgotten. (Source: The Hindu 5 April, 2017)

(1). According to passage, it was difficult to get along with Marcus Bartley because of his
(a) bad temper.

(b) rude behaviour.

(c) tough style of working in film industry.

(d) drug addiction.

(2). Consider the following statements regarding the film 'Chemmeen '

I. Bartley was very excited when Ramu Kariat signed him for Chemmeen.

II. Chemmeen was a Tamil film.

III. It was released in 1965.

Select the correct statements using the code given below.

(a) II and III only

(b) I and II only

(c) All are Correct

(d) I and III only

(3). Where did Marcus Bartley get his first job?

(a) Bollywood

(b) Acting School

(c) Newspaper

(d) Writer

(4). For which film Marcus Bartley got his first National Award 1969-1970?

(a) Chemmeen

(b) Shanti Nilayam

(c) Mayabazaar

(d) Vyarawalla

(5). Which of the following statements is incorrect about Marcus Bartley?

- (a) He was fluent in Tamil and Telugu.
- (b) He got his first film in Madras.
- (c) He was an Anglo-Indian.
- (d) He was a cinematographer.

(6). Choose the word/words which is Most Similar to the word printed in bold in the passage.

Grail

- (a) Cup
- (b) Beaker
- (c) Sacred Vessel
- (d) draught

(7). Choose the word which is Most Similar to the word printed in bold in the passage.

Unanimous

- (a) Divided
- (b) Universal
- (c) Popular
- (d) Cut

(8). Choose the word which is Most Opposite to the word printed in bold in the passage.

Rookie

- (a) Expert
- (b) Colt
- (c) Trainee
- (d) Apprentice

(9). Choose the word which is Most Opposite to the word printed in bold in the passage.

Jeopardise

- (a) Stake
- (b) Risk
- (c) Imperil
- (d) Protect

(10). Choose the word which is Most Similar to the word printed in bold in the passage.

Iconoclastic

- (a) Individualistic
- (b) Agnostic
- (c) Atheistic
- (d) Unbelieving

Passage 6

Science consists of knowing, Art consists of doing. What I must do in order to know, is Art subservient to Science: What I must know in order to do, is Science subservient to Art.

Art, then, is defined by two broad distinctions: first, its popular distinction from Nature; and next its practical and theoretic distinction from Science. Both of these distinctions are observed in the terms of our definition given above. Within the proper limits of this definition, the conception of Art, and the use of the word for it, have undergone sundry variations.

These variations correspond to certain vicissitudes or developments in the order of historical facts and in society. The requirements of society, stimulating the ingenuity of its individual members, have led to the invention of arts and groups of arts, constantly progressing, with the progress of civilization, in number, in complexity and in resource.

The religious imagination of early societies, who find themselves in possession of such an art or group of arts, forgets the history of the invention, and assigns it to the inspiration or special grace of some god or hero. So the Greeks assigned the arts of agriculture to Triptolemus, those of spinning and navigation to Athena, and of music to Apollo. At one stage of civilization one art or group of arts is held in higher esteem, another at another. In societies, like most of those of the ancient world, where slaves were employed in domestic service, and upon the handicrafts supplying the immediate utilities of life - food, shelter and clothing - these constituted a group of servile arts. The arts of husbandry or agriculture, on the other hand, have alternately been regarded as servile and as honourable according as their exercise has been in the hands of a subject class, as under feudal institutions, or, as under the Roman republic, of free cultivators. Under feudal institutions, or in a society in a state of permanent war, the allied arts of war and of government have been held the only honourable class.

In commercial states, like the republics of Italy, the arts of gain, or of production (other than agricultural) and distribution, have made good their title to equal estimation and greater power beside the art of captains. But among peaceful arts, industries or trades, some have always been held to be of higher and others of lower rank; the higher rank being assigned to those that required larger operations, higher training, or more thoughtful conduct, and yielded ample returns - the lower rank to those which called for simple manual exercise, especially if such exercise was of a disagreeable or degrading kind. In the cities of Italy, where both commerce and manufactures were for the first time organized on a considerable scale, the name *arte*, Art, was retained to designate the guilds or corporations by which the several industries were exercised; and, according to the nature of the industry, the art was classed as higher or lower (*maggiore* and *Minore*).

The arts of which we have hitherto spoken have arisen from positive requirements, and supply what are strictly utilities, in societies; not excluding the art of war, at least so far as concerns one-half of war, the defensive half. But war continued to be an honourable pursuit, because it was a pursuit associated with birth, power and wealth, as well as with the virtue of courage, in cases where it had no longer the plea of utility, but was purely aggressive or predatory; and the arts of the chase have stood in this respect in an analogous position of those of war.

There are other arts which have not had their origin in positive practical needs, but have been practiced from the first for pleasure or amusement. The most primitive human beings of

whom we have any knowledge, the cave-dwellers of the Paleolithic period, had not only the useful art of chipping stones into spear-heads, knife heads and arrow-heads, and making shafts or handles of these implements out of bone; they had also the ornamental art of scratching upon the bone handle the outlines of the animals they saw mammoth, rhinoceros or reindeer—or of carving such a handle into a rude resemblance of one of these animals. Here we have a skill exercised, in the first case, for pure fancy or pleasure, and in the second, for adding an element of fancy or pleasure to an element of utility. Here, therefore, is the germ of all those arts which produce imitations of natural objects for purpose of entertainment or delight, as painting, sculpture, and their subordinates; and of all those which fashion useful objects in one way rather than another because the one way gives pleasure and the other does not, as architecture and the subordinate decorative arts of furniture, pottery and the rest.

Arts that work in a kindred way with different materials are those of dancing and music. Dancing works with the physical movements of human beings. Music works with sound. Between that imitative and plastic group, and the group of these which only produce motion or sound and pass away, there is the intermediate group of eloquence and the drama, which deal with the expression of human feeling in spoken words and acted gestures. There is also the comprehensive art of poetry, which works with the material of written words, and can ideally represent the whole material of human life and experience. Of all these arts the end is not use but pleasure, or pleasure before use, or at least pleasure and use conjointly.

In modern language, there has grown a usage which has put them into a class by themselves under the name of the Fine Arts, as distinguished from the Useful or Mechanical Arts. Nay more, to them alone is often appropriated the use of the generic word Art, as if they and they alone were the arts. And further yet, custom has reduced the number which the class-word is meant to include.

When Art and the works of Art are now currently spoken of in this sense, not even music or poetry is frequently denoted, but only architecture, sculpture and painting by themselves, or with their subordinate and decorative branches. In correspondence with this usage, another usage has removed from the class of arts, and put into a contrasted class of manufactures, a large number of industries and their products, to which the generic term Art, according to our definition, properly applies. The definition covers the mechanical arts, which can be efficiently exercised by mere trained habit, rote or calculation, just as well as the fine arts, which have to be exercised by a higher order of powers.

But the word Art, becoming appropriated to the fine arts, has been treated as if it necessarily carried along with it, and as if works to be called works of art must necessarily possess, the attributes of free individual skill and invention, expressing themselves in ever new combinations of pleasurable contrivance, and seeking perfection not as a means towards some ulterior practical end but as an ideal end in itself.

1. According to the passage, some ‘peaceful arts’ have been given higher ranking than others due to all the following EXCEPT:

- (1) They required larger operators.
- (2) They were conducted in a smoother manner than the lower ranked arts.
- (3) They yielded better returns.
- (4) They were conducted with greater thought.

2. The Greeks assigned the arts of spinning and navigation to

- (1) Apollo (2) Olympics (3) Athena
- (4) Triptolemus

3. According to the author, the art of war has continued to be an honourable pursuit because

- (1) it was associated with birth, power, courage and wealth.
- (2) it resulted in the acquisition of wealth and power.
- (3) it helped the people in safeguarding their territories.
- (4) it gave a chance to the warriors to display their valour and patriotism.

4. Which of the following, according to the author, has led to the growth of arts and group of arts?

- (1) The need to stimulate the ingenuity of the people.
- (2) The requirements of the society.
- (3) The natural creativity of primitive people.
- (4) The religious imagination of early societies.

5. The author quotes arts like music, poetry, dancing to describe that their end is

- (1) different from those of drama
- (2) pleasure before use
- (3) pleasure and use
- (4) both (2) and (3)
