

Lab Assessment-II

Operating System

1. Write a shell script to check whether the file have all the permissions or not.
2. Write a shell script to input the marks of a student in three subjects and determine their grade.
3. Write a shell script to display the Fibonacci series up to a specified limit n.
4. Write a shell script to find whether a number is even or odd.
5. Write a shell script to check if the number entered at the command line is prime or not.
1. Write a shell script to display the multiplication table for a given number.
2. Write a shell script to reverse the number entered by the user.
3. Write a shell script to determine whether a given number is an Armstrong number.
4. Write a shell script to print a half-pyramid pattern using numbers.
5. Simulate FCFS CPU scheduling algorithm using shell script.
6. Simulate SJF CPU scheduling algorithm using shell script.
7. Simulate Priority CPU scheduling algorithm using shell script.
8. Simulate Round Robin CPU scheduling algorithm using shell script.
9. Simulate FIFO page replacement algorithm using shell script.
10. Simulate LRU page replacement algorithm using shell script.
