

DEPARTMENT

OF

COMPUTER ENGINEERING & APPLICATIONS

Institute of Engineering & Technology

Assignment-II (2025-26)

Course: BCA

Year: 3rd Semester: 5th

Subject Name: Mobile Application Development - I

Subject Code: BCAC 0030

1. Explain how the SQLite database works in Android Studio. Describe in detail the role of all four key classes involved in SQLite operations in Android.
2. Write short notes on the following Android layout types:
 - a)FrameLayout
 - b)RelativeLayout
 - c)LinearLayout
 - d) ConstraintLayout
3. Explain how the Firebase Realtime Database stores data in a JSON-based hierarchical structure.
4. Write the XML layout code and the corresponding Java code to create three buttons that display a **Toast**, **Snackbar**, and **AlertDialog** respectively when clicked.
5. Write the XML layout code and the Java code required to create a simple **“To-Do List”** application interface.
6. Explain how Postman is used to fetch data from an API. Describe the steps involved in sending requests and analyzing responses.

7. Explain the different methods available for communication between a Fragment and its host Activity in Android. Include all the classes needed for fragment communication.
 8. Define RESTful web services and explain how they differ from SOAP-based web services in terms of architecture, data format, communication style, and implementation.
