

CARBOHYDRATES

Macro and Micro Nutrients

- Macronutrients are the nutrients we need in larger quantities that provide us with energy: in other words, fat, protein and carbohydrate.
- Micronutrients are mostly vitamins and minerals, and are equally important but consumed in very small amounts. We generally get our micronutrients along with macronutrients.

Carbohydrate

- naturally occurring compounds and its derivatives.
- most abundant and widespread organic substances in nature
- essential constituents of all living things.
- formed by green plants from carbon dioxide and water during the process of photosynthesis.
- serve as energy sources and as essential structural components in organisms.

RDA

Recommended **D**ietary **A**llowance

But it is not fix, why?

- AGE
- GENDER
- PHYSIOLOGICAL REQUIREMENTS
- PHYSICAL ACTIVITY

Sources

- fresh fruits
- Vegetables
- Corn
- Potatoes
- milk and milk products.
- Carbohydrates can be found in different forms, such as sugars, starch, and fibres.

Functions

Following are the important carbohydrates functions:

- main source of energy.
- maintaining a healthy digestive system.
- The fiber in carbohydrates helps in lowering blood cholesterol.
- It retains protein from being burned so it can be used to build and
repair.

Deficiency

Deficiency of carbohydrates can lead to

- ✓ Loss of stamina as they provide energy to the body.
- ✓ Weakening of the body
- ✓ Constipation
- ✓ Lethargy
- ✓ Bad breadth
- ✓ Dizziness

Excess

1. Weight gain
2. High blood sugar
3. Fatigue
4. High cholesterol
5. High serum insulin
6. Skin issues
7. High Triglycerides
8. Craving to have sweets
9. Constipation and bloating
10. The digestive system gets disturbed
