the mo

Question Find the mode of the following distribution:

Size (x)	1	2	3	4	5	6	7	8	9	10	11	12
Frequency (f)	3	8	15	23	35	40	32	28	20	45	14	6

Mode = 6.

② Calculate the mode of the following frequency distribution

Height in inch	58	59	60	61	62	63	64	65	66	67	Total
No. of person	4	6	5	10	20	22	24	6	2	1	100

② Mode for Continuous Frequency
In case of continuous frequency distribution
Mode is given by the formula.

$$\text{Mode} = l + \left(\frac{f_1 - f_0}{2f_1 - f_0 - f_2} \right) \times h$$

Where

- l = lower limit of modal class.
- f_1 = frequency of Modal class
- f_0 = pre frequency of Modal class
- f_2 = post frequency of Modal class
- h = length of modal class.

Modal class
= class of interval
of height
frequency

Question Find the mode for the following distribution:

Class-interval	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80
Frequency	5	8	7	12	28	20	10	10

46.67

Mode

Mode is the value which occurs most frequently in a set of observations and around which the other items of the set cluster densely.

① Ungrouped data

From the data given below, find modal value:

1, 3, 1, 3, 3, 5, 3, 3, 1, 5, 3, 3, 4, 5, 5, 4, 2, 3
2, 3, 3, 7, 6, 3, 2, 5, 2, 3, 3, 2, 6, 2

② A khadi shop in Bombay sold 100 pairs of shoes in khadi exclusive on certain day with the following distribution. Find the mode of the distribution.

Size of the shoe 4 5 6 7 8 9 10

No. of pairs 10 15 20 35 16 3 1

③ Find the mode of the following distribution.

x : 1 2 3 4 5 6 7 8

f : 4 9 16 25 22 15 7 3

In any one (or more) of the following cases.

(i) If the maximum frequency is repeated.

(ii) If the maximum frequency occurs in the very beginning or at the end of the distribution and

(iii) If there are irregularities in the distribution.

the value of mode is determined by the method of grouping.
